Wiring

On the back of the meter, unscrew the black user access lid and remove it. Remove the 15 pin screw connector from its bag. Install the wires through the cable ports into the 15 pin screw connector in their respective locations. Plug the 15 pin screw connector into its socket. **Be sure all pins align properly and that the connector has not slipped to one side.** Refer to the complete manual for further details. *(C1 = power/output cable, AC = AC power cable)*

![Wiring Diagram]

**WARNING:** Improper sealing of glands or cables will invalidate any warranty. If plugs or cable glands are removed, reinstall using Teflon pipe sealant, or tape, to ensure maximum moisture protection.

![Clamp cable with strain relief clips. Attach drain wire lug to bracket post.]

**CRITICAL!** Torque cable gland sealing nut to 22 in-lbs.

Refer to the **Mechanical Quick Start Guide** or the complete instruction manual for details on mechanical installation.
Menu System

The HOME Screen displays flow volume, direction of the flow total and flow RATE along with status conditions such as Empty Pipe. Two buttons below the LCD display are used to access menu screens for viewing and changing meter setup parameters.

These two buttons are light sensors which can detect when a finger is covering them. Only three button touch actions are needed to control navigation through the menus, settings changes and back to the home screen.

All menu screens consist of two rows of tabs surrounding a dialog box that lets you view and change setup parameters. To enter the Menu System perform the hold and tap sequence.

Changing Settings

T UNIT
View or change TOTAL volume units

R UNIT
View or change flow RATE units

Set P
View or change pulse output scaling

DAMP
View or change # of samples for rolling average.
