---

Note: These instructions cover the iMAG 4700r. For details on the iMAG 4700 or 4700p, see the iMAG 4700 or iMAG4700p Municipal/Industrial Magmeter Instructions.
The **iMAG-Series** meters are the most economical flanged electromagnetic flowmeters on the market. With electrodes designed to discourage fouling, it is available in 3” to 12” pipe in municipal or industrial water, waste and reclaimed water, pump stations, and packaged plant applications. Minimal straight pipe requirements allow iMAG-Series meters to be used in piping configurations where there is little space between the meter and an elbow.

iMAG-Series meters are CE certified, certified to NSF/ANSI standard 61 and are rated IP68 for applications where the meter may be operated under water to a depth of at least 10 feet (3 meters) continuously.

The display for the iMAG 4700r is mounted remotely for ease of access. Both rate and total indication are standard. Rate and total units and pulse scaling can be set via the front panel touch key pad by the user. Bidirectional flow reading is standard with totals available in forward, reverse, net flow, batch forward flow, and batch reverse flow. Batch totals can be reset.

A power/output cable allows outputs for use with a variety of Seametrics and other displays and controls for remote reading and telemetry applications. Pulse output is standard on all units. Additionally, 4-20mA passive current loop, HART protocol, and Modbus® protocol outputs are optional. The iMAG 4700r can be supplied with an optional internal AC power supply.

### Features

- Powder-coated diecast aluminum housing
- User access lid (on back)
- Remote cable access
- Equalization lug
- Flanges, 150 lb. ANSI pattern
- Santoprene/Polypropylene Liner (Noryl® Liner, 3” only)

---

No moving parts!

| **Display**         | Type: 128x64 dot-matrix LCD                                            |
|                     | Digits: 5 Digit Rate, 8 Digit Total                                   |
| **Units**           | Rate Volume Units: Gallons, Million Gallons, Barrels, Cubic Feet, Cubic Meters |
|                     | Rate Time Units: Second, Minute, Hour, Day, Gallons x 10, Cubic Meters, Cubic Feet, Million Gallons, Cubic Feet x 1000, Barrels (42 gal), Cubic Feet, Million Gallons, Barrels x 10, Cubic Meters, Cubic Feet x 1000, Barrels (42 gal) |
|                     | Total Volume Units: Gallons, Million Gallons, Barrels, Cubic Feet, Cubic Meters |

| **Power**           | DC Power: 9-36 Vdc @ 250 mA max, 30 mA average                        |
|                     | Battery Backup (Not for use as primary power): One lithium 7.2V ‘D’ size battery pack, replaceable. |
|                     | AC Power (IMAG 4700r and 4700p only): 85-264Vac, 50/60Hz, 0.12A        |
|                     | Battery (IMAG 4700 only): One lithium 7.2V ‘D’ size battery pack, replaceable. |

| **Scaled Pulse Output** | Signal: Current sinking pulse, isolated, 36 Vdc at 10 mA max |
|                        | Pulse Rates: User-scalable from 0.1 to 99,999.9 volume units/pulse. Pulse width is one-half of pulse period with minimum pulse width of 2.5 ms, 200 pulses/sec max, 150 pulses/sec max with battery option |

| **Options**           | 4-20mA Current Loop: Isolated, passive, 24Vdc, 650 Ω maximum current loop |
|                       | HART/4-20mA: HART protocol over 4-20mA line                           |
|                       | High Speed Digital Output (IMAG 4700 & 4700p only): Isolated, open collector, 24 Vdc |
|                       | Serial Communications: Isolated, asynchronous serial RS485 (Reconfigurable for RS232 or 3.3V CMOS), Modbus® RTU protocol (factory selectable) |

| **Cable**             | Power/Output Cable: 20ft (6m) standard length polyurethane jacketed cable—for power and outputs (lengths up to 200’ available). |
|                       | Remote Display Cable (IMAG 4700p): 20ft (6m) standard length polyurethane jacketed cable—for connection between meter and remote display (lengths up to 200’ available). |

| **Conductivity**      | >20 microSiemens/cm                                                   |
| **Empty Pipe Detection** | Hardware/software, conductivity-based                                 |

**Regulatory**

- CE (EN 61326), 4"-12" certified to NSF/ANSI standard 61 60°C (140°F); 3" certified to NSF/ANSI standard 61 Cold Water 23°C (73.4°F)

**Environmental**

- NEMA 6P, IP68 (10ft (3m) depth, continuously)

**Straight Pipe Recommendations** \((X = \text{diameter})\)

**NOTE:** These configurations are to be used as general guidelines and do not cover every possible installation. A combination of two or more obstructions will require additional straight pipe. If there is any concern about the length of pipe required for a specific application, please contact your local dealer.
**Full Pipe Recommendations**

- **Recommended:** Keep pipe full at meter for accuracy
  
- **Not Ideal:** Allows air pockets to form at meter
  
- **Recommended:** Keeps pipe full at meter for accuracy
  
- **Not Ideal:** Post-valve cavitation can create air pocket
  
- **Recommended:** Allows air to bleed off
  
- **Not Ideal:** Air can be trapped
  
- **Recommended:** Improved accuracy results from unimpeded electrodes
  
- **Not Ideal:** Air bubbles and sediment on the electrodes can affect accuracy
Positioning the Meter

These meters can be installed horizontally, vertically (with upward flow), and in any radial position. **Using a check valve on the upstream side of the meter, and/or an air vent (vacuum relief valve) in the same, unobstructed run of pipe as the meter, is required in any installation where the meter may be exposed to suction when the system is not in normal operation. Suction can cause damage to the liner.** Liner damage caused by suction, without the use of a check valve and/or air vent, may void the warranty.

**Straight Pipe Recommendations.** The iMAG requires straight pipe before and after the meter for best accuracy. However, the ability of electromagnetic meters to average the flow across the entire pipe allows for shorter straight pipe recommendations than most mechanical meters (see page 7).

**Full Pipe Recommendations.** To prevent false readings, this meter is designed to indicate 'EMPTY PIPE' if one or more electrodes is exposed. For highest accuracy, install the meter so that the pipe will be full when there is flow. If air bubbles may be present in the pipe or sludge accumulation is an issue, rotate the meter by one flange hole to position the control housing at a 45˚ angle (see diagrams on page 8).

**Fittings.** The iMAG has ANSI 150 lb. drilled flanges and will mate with any other ANSI 150 lb. flanges. **See table on page 10 for flange bolt tightening torque specifications.**

**Calibration.** The iMAG is factory-calibrated before shipping. The frequency of recalibration will depend on the needs of each application and local regulatory policies.

**Chemical Injection.** When the iMAG is used in a chemical injection application, the chemical injection point must be placed downstream of the magmeter OR far enough upstream for complete mixing to occur before the fluid reaches the meter. When unmixed chemical alternates with water passing through the meter, the rapid changes in conductivity may cause sudden spikes and drops in the meter’s reading, resulting in inaccurate measurement. The magmeter will restabilize, however, with a steady flow of fluid of uniform conductivity.

**CAUTION:** In chemical injection applications, install chemical injection point downstream of magmeter, or far enough upstream to allow complete mixing of fluids.

---

**Installing Gaskets**

1. Be sure all mating surfaces are smooth and free of debris.
2. Install Seametrics provided gaskets, or equivalent, on each end of meter as shown in diagrams below. If using grounding rings, install one gasket on each side of the grounding ring.
3. **Failure to install gaskets will void warranty.**
Tightening Flange Bolts

NOTE: Mating pipe flanges must be ANSI 150# full face (FF) and/or raised face (RT).

1. Tighten flange bolts in an alternating pattern.
   - Tighten left flange bolt-1 to 20% recommended torque.
   - Tighten right flange bolt-1 to 20% of recommended torque.
   - Repeat steps a and b for each bolt in an alternating order, such as shown at right, tightening to 40%, then 60%, then 80%, and then 100%.

2. Test for leaks.

3. If needed, tighten further in 10% increments until leaking stops. **DO NOT over-tighten. Over-tightening can cause serious damage to the flow meter.**

4. Recheck after 24 hours, adjusting if needed.

---

**Suggested Tightening Sequence**

---

**Caution:** Improper tightening sequence can cause serious damage to the flow meter.
- Do not tighten one side at a time.
- Do not tighten each bolt completely at one time.

---

**SUGGESTED FLANGE BOLT TORQUE**

**Equalization and Grounding**

**WARNING: ELECTRICAL SHOCK HAZARD**
When the iMAG is installed in a plastic piping system, or when externally powered, the piping system must be grounded to meet national and local electrical safety codes. Failure to do so can result in electrocution.

---

**Metal Pipe Installations.** To equalize the electrical potential of the fluid, the iMAG meter, and the surrounding pipe, secure the flange plates (factory-installed on the equalization wire) to both pipe flanges at one of the bolt holes, as shown below. Be sure the lock washer fits between the pipe flange and the flange plate. For the best electrical bonding, remove rust and paint to expose clean, bare metal where the equalization flange plate lock washer contacts the pipe flange. Connection must be inspected periodically for corrosion to maintain the necessary low resistance connection.

---

**Plastic Pipe and Electronically Noisy Installations.** When the iMAG 4700 is installed in plastic pipe or in an electrically noisy system (near a VFD etc.), grounding rings are recommended. As shown in the diagram below, the equalization wires should be solidly connected to the grounding ring tabs instead of the flange bolts as in metal piping installations. Where lightning is a threat, or in severe electrical environments, an optional connection to a nearby equipment ground or ground rod may be advisable.

---

**Grounding Ring Part Numbers:**

- 3” = 102157
- 4” = 100876
- 6” = 100877
- 8” = 100878
- 10” = 100879
- 12” = 103288
General Cable Information

For the iMAG 4700r, a cable needs to be installed from the terminal block on the remote display interface board to the 15 pin connector inside the remote display. This cable is referred to as the remote meter cable. Four wires need to be connected: +REM PWR, -REM PWR, B, and A. There are an additional 2 cable ports that can be used for power (DC or AC) and any outputs that are installed on the meter such as scaled pulse, 4-20mA, Modbus®, and HART. (See Sample Control Cable Wiring Diagrams and Control Cable Wiring Table.)

The display is available in either DC or AC versions.

DC version

AC Version

If the meter is configured with AC power, one of the additional Power/Output cable ports must be reserved for AC power only. We do not recommend combining AC power signals with any of the meter outputs in a single cable. If the meter is configured for DC power, you may have one or two cables, depending on configuration. (See Cable Wiring Diagrams.)

Cable Gland Opening and Sealing

![Diagram]

**WARNING:** Improper sealing of glands or cables will invalidate any warranty. If plugs or cable glands are removed, reinstall using Teflon pipe sealant, or tape, to ensure maximum moisture protection.

- Remove plug & o-ring. Insert cable gland/strain relief. Feed cable through cable gland.
- Clamp cable with strain relief clips. Attach drain wire lug to bracket post.
- **CRITICAL!** Torque cable gland sealing nut to 22 in-lbs.
**CONNECTIONS**

**IMAG 4700r INSTRUCTIONS**

**Cable Installation**

**Remote Display Wiring**

1. On the remote display, unscrew the display lid and remove it.
2. The display assembly is held in with 3 fasteners. If those fasteners are steel screws (silver) remove them with a T-15 Torx driver and lift the display out of the meter. If the fasteners are white Nylon tabs with exposed straight slots, simply grasp the two finger recesses in the display, then pop the display up and out of the housing. This will expose the internal 15 pin connector. Be sure **NOT** to undo any connections to the display assembly as you remove it.

3. Remove the 15 pin screw connector from the bag.
4. Remove the plug and o-ring from the cable port(s) where you want to insert the cable(s).
5. Install cable gland(s) using Teflon pipe sealant, or tape, and insert cable end(s).
6. Strip cable jacket and conductors and install the wires into the screw connector in their respective locations (+REM PWR (red), - REM PWR (black), B (orange), and A (blue)).

7. At this point, install any other options (Modbus®, pulse, HART, etc...) using the Power/Output cable(s) through the Power/Output cable port(s), and securely screw them into the screw connector in their respective locations. (See Cable Wiring Table for details.)
8. If using AC power version continue here. If not, then skip to step 13. If AC then take the red and black wires coming out of the AC supply board and install in POWER+ and POWER- (red wire to pin 15, black wire to pin 14).
9. When the AC power supply board is installed, 85-264 VAC power is supplied via a 3 conductor power cord. If installed outdoors or less than 33ft. (10m) from a utility power service entrance, AC power should be supplied via a properly-grounded surge suppression device.
10. Remove the plug and o-ring from the AC cable port.
11. Install cable gland and insert cable end.
12. Strip cable jacket and conductors and install 3 conductor cable power cable and wire to Line (L), Neutral (N) and ground (G) positions on power supply terminal block.

13. Plug the 15 pin screw connector into its socket. Be sure all pins align properly and that the connector has not slipped to one side.

14. Plug the backup battery cable into the back of the display assembly. (Standard backup batteries are two 3.6V “D” lithium cells. For the AC option, the backup battery is a 9V alkaline cell.)

**WARNING:** BACKUP BATTERIES ARE NOT INTENDED AS A PRIMARY POWER SOURCE OF A MAINS (DC or AC) CONFIGURED METER.
15. Secure the cables inside the internal strain relief clips and tighten the cable gland sealing nuts securely (torque nut to 22 in-lbs). A loose nut could cause moisture ingress and compromise the meter head’s IP68 rating, voiding the warranty.

16. Remount the display assembly, being careful to not pinch any wires, and install the display assembly screws.

17. Reinstall the display lid, being sure to avoid cross-threading the lid.

Remote Meter Wiring

1. On the remote meter, unscrew the user access lid and remove it.

2. Remove the 5 pin screw connector from its socket.

3. Remove the plug and o-ring from the cable port.

4. Install cable gland and insert cable end.

5. Strip cable jacket and conductors and install the wires into the 5 pin screw connector in their respective locations (+REM PWR (red), -REM PWR (black), B (orange), and A (blue)).

6. Secure the remote sensor cable inside the internal strain relief clip and tighten the cable gland sealing nut securely (torque nut to 22 in-lbs.). A lose nut could cause moisture ingress and compromise the meter head’s IP68 rating; voiding the warranty. Plug the 5 pin screw connector into its socket.

7. Reinstall the user access lid. Be sure to avoid cross-threading the lid and to not pinch any wires with the lid.
CONNECTIONS

Remote meter

15 pin connector in remote display
**Pulse Output Application - Sourcing Mode (Recommended for Rin < 30kΩ)**

**Pulse Output Application - Sinking Mode (Recommended for Rin > 30kΩ)**

**Analog (4-20mA Current Loop) Output Application**

**Minimum resistor value is (100 x Vs) ohms. Higher resistances maybe used depending on frequency and cable length. Longer cables and high frequencies require lower resistance.**

**Resistor RL converts 4-20mA current to voltage for voltage input only devices.**
**Cable Shield.** In general, the cable shield and its bare drain wire should be left unconnected at the user equipment end of the cable to minimize “ground loop” problems.

**Pulse Output Configuration.** A pulse output is standard on all models. Since this is an isolated output, the external equipment must include a DC power source to regenerate the pulse from the open-collector output (transistor equivalent of a contact closure). A pull-up or pull-down resistor may be needed if not included in the user equipment as shown in the diagrams. Both the power source and resistor may be supplied internally in some types of control and monitoring devices. If not, as for most PLC discrete input modules, they must be added externally at the module input terminals. The pulse output rate in volume units/pulse can be set by the user via the SETP tab on the meter’s setup menus.

Because the pulse output of an iMAG 4700 meter is set by the user, care must be taken to assure the output pulses do not exceed the maximum frequency of the meter while also ensuring a reasonable resolution.

K-factor: Remember that SETP is expressed in units totaled per output pulse (G/P if using gallons) while K-factors are expressed in pulses per gallon (P/G.) To determine K-factor from SETP, divide 1 by SETP (if SETP is expressed in gallons.) Conversely, 1 divided by the K-factor equals SETP.

iMAG 4700 meters that were initially configured as battery powered units have a maximum output frequency of 150 Hz. Those that were initially configured as powered units have a maximum output frequency of 200 Hz.

Because all pulse outputs (SETP) are configured in (rate) units totaled per pulse, all sizes of meters can be configured with the same SETP values.

For example, if your rate is chosen as gallons per minute (GPM) the table below applies. If your rate is different, simply use your rate label in place of (GPM.) The numerical values will remain the same.

**Pulse Units.** The units of measure of SETP are independently selectable and are not tied to rate or total. Upon change of the SETP unit, the pulse output may take up to 10 seconds, or the duration of one pulse (whichever is longer) to take effect.

If Pulse Output is Inconsistent. The PDAMP filter may need to be increased.

**Pulse Width Timing.** The unit and value of SETP must be chosen to keep the duration between meter pulse outputs to less than 500 seconds.

```
<table>
<thead>
<tr>

<td>9000</td>
</tr>
</tbody>
</table>

Lower frequency output pulses (1 pulse for some particular number of gallons) can also be set.

Any output frequency can be determined by:

Rate (units/minute) ÷ SETP (units/pulse) = pulse/minute Hz = pulse/minute ÷ 60 seconds / minutes

For reference/comparison only

K-factors and the equivalent SETP values for old style WMX units are shown below.

```
<table>
<thead>
<tr>
<th>WMX</th>

<td>0.06*</td>
<td>0.16</td>
<td>0.30</td>
<td>0.47</td>
<td>0.65</td>
</tr>
</tbody>
</table>
```

*Note that on the iMAG 4700 you would need to choose a SETP value of 0.1 for the 4*.  

Seametrics • 253.872.0284  Page 18  seametrics.com
Analog Output (4-20mA) Configuration. *(Not available on battery only units.)* Since the meter’s analog output is isolated and passive, loop power must be supplied externally as shown on previous page. (In addition, an external resistor \( R_L \) will be needed to convert the loop current to voltage for voltage-only input devices.) The meter’s loop transmitter minimum voltage drop is 6Vdc (8Vdc with HART) which, with wiring resistance and loop power supply voltage, will determine the maximum resistance for \( R_L \). The flow rates corresponding to 4 and 20mA can be set by the user via the SET 4 and SET20 tabs on the meter’s setup menus.

**Note:** As configured by the factory, any alarm state will force 22.8mA on the loop. This can be changed to 3.2mA - see Technical Bulletin, ‘iMAG4700/AG3000: Changing the 4-20mA Alarm’.

**HART Configuration.** *(Not available on battery only units.)*

The HART protocol, rev.7.5, allows for a Polling address between 0 and 63. The default value in the iMAG is 0. To change the Polling address, use iMAG menu HPOLL to set the Polling address.

To get to this menu, move to the EXIT tab and tap the left button 4 times. This will bring up the SUBMENU page. Navigate to the HPOLL tab. Use the left button to select the Polling address.

*4-20 mA loop has maximum loop resistance of 650 ohms and requires a 24Vdc power supply.*

**Modbus® Serial Communication Configuration (factory configured).** *(Not available on battery only units.)* These connections provide a half-duplex, isolated, RS485 serial communications port using the Modbus messaging protocol. The port is reconfigurable by internal jumper settings to full-duplex RS232 or 3.3V CMOS (See Seametrics Modbus Interface Description manual for instructions). The TXD connection is the transmitted data output from the meter and RXD is the received data input to the meter. See Seametrics’s Modbus Interface Description, LT-103393 (available at www.seametrics.com) for supported Modbus message protocol and electrical interface specifications.
Changing Flow Meter Settings

**Home Screen and General Navigation**

The HOME Screen displays flow volume, direction of the flow total and flow RATE along with status conditions such as Empty Pipe. Two buttons below the LCD display are used to access menu screens for viewing and changing meter setup parameters.

These two buttons are light sensors which can detect when a finger is covering them and activate upon release. Only three button touch actions are needed to control navigation through the menus, settings changes and back to the home screen.

**HORIZONTAL SCROLLING:**
Tap right button to scroll horizontally through menu tabs or move horizontally within a tab dialog when applicable.

**SELECT:**
Tap left button to change a highlighted item within a tab dialog.

**ENTER/EXIT:**
Hold left button while tapping right button once to enter or exit a tab dialog or to navigate between the HOME and other menu screens.

**Changing Total Direction/Resetting Batch Totalizers**

On the Main screen, hold and tap 5 times to scroll through the total direction options. Release to select a total direction.

Once BATCH FORWARD or BATCH REVERSE is selected, tap four times to reset batch totalizer.

**Entering Menu System**

To enter the Menu System perform the hold and tap sequence. The Passcode entry screen will display. The default passcode is 000000. If a different passcode has previously been set, use the and to enter that passcode. In either case, hold and tap again to move into the menu system. (If you enter the wrong passcode, hold and tap again to return to the previous screen. See page 21 for information on how to change a passcode.)

**Making Selections**

Once in the Menu System, move from tab to tab by tapping the right button. (See the next page for details on the various available tabs.)

**Select the parameter.** In the screen for the highlighted tab you will see the current parameter value for that tab. Tapping the right button, move to the tab for the parameter you want to change.

In this example, the first line indicates that the current unit for the TOTAL is GALLONS. The next two lines tell you what to do next.

<table>
<thead>
<tr>
<th>T UNIT</th>
<th>R UNIT</th>
<th>SET P</th>
<th>DAMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOTAL = GALLONS</td>
<td>PRESS (a) + (b) TO SET TOTAL UNITS FOR DISPLAY</td>
<td>SET 4</td>
<td>SET 20</td>
</tr>
</tbody>
</table>

If you would like to change the TOTAL units, just perform the hold and tap sequence to bring up a screen to change the setting.

<table>
<thead>
<tr>
<th>T UNIT</th>
<th>R UNIT</th>
<th>SET P</th>
<th>DAMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOTAL:</td>
<td>GALLONS</td>
<td>PRESS (a) TO CHANGE</td>
<td>SET 4</td>
</tr>
</tbody>
</table>

**Select a new setting.** Select the new setting by scrolling through a list of selections as in the screen illustration below by tapping the left button to find a different TOTAL unit.

**Accept changes.** To accept any changes you have made, perform the hold and tap sequence.

**When finished making changes.** When you are finished making changes, move to the EXIT tab using the right button.

To return to the HOME screen, perform the hold and tap sequence.
Standard Menu Options

Note: Available options will depend on specific meter configuration. Not all options are available on all meters. Options not ordered with your meter will not appear on the meter menu.

T UNIT
View or change TOTAL volume units

R UNIT
View or change flow RATE units

SET P
View or change pulse output scaling

DAMP
View or change # of samples for rolling average.

SET 4
View or change flow rate corresponding to 4mA.

SET 20
View or change flow rate corresponding to 20mA.

EXIT
Return to HOME SCREEN or enter SUBMENU

Special SUBMENU for Further Options

The EXIT tab in the MAIN MENU has a second function. If, instead of using the hold and tap sequence to return to the HOME screen, you tap five times, you will be redirected to a SUBMENU screen from which you can access several more options. Navigation in this SUBMENU is the same as for the MAIN MENU. Whenever you wish, go to the EXIT tab in the SUBMENU and perform the hold and tap sequence to return to the MAIN MENU.

INFO: Meter model number, serial number, and firmware version.
COMM: Modbus® baud rate and parity.
MBID: Modbus® address
HPOLL: HART Address
EXIT: Return to MAIN MENU.
To Change a Passcode and Decimal Places

The iMAG4700 has a passcode system for restricting access to the menus. The iMAG comes from the factory with the passcode set to 000000. When a user attempts to enter the menu system (see details on page 20), the passcode entry screen will be displayed.

The default passcode is 000000. If a different passcode has previously been set, then the user must enter that passcode at this time. After entering the passcode, or leaving it at 000000 if using the default passcode, the user does the tap and hold sequence to move into the menu system.

To change the passcode, you must use the THIRD MENU screen. Access the THIRD MENU screen as follows:

1. Enter the main menu system, as described above.

2. On the main menu, tab over to the EXIT tab and tap the ▼ five times. A SUBMENU screen will display.

3. On the SUBMENU screen tab over to the EXIT tab and tap the ▼ five times. The THIRD MENU screen will display.

4. To set the passcode, hold and tap and then use the ▲ and ▼ to enter the new code.

5. Hold and tap again to return to the THIRD MENU screen

6. Tab to EXIT, and then hold and tap to return to the SUBMENU.

To change the number of decimal places in the total

1. To set the decimal point, hold and tap on SETD and then use the ▼ to move the decimal point.

2. Hold and tap again to return to the THIRD MENU screen.

3. Tab to EXIT, and then hold and tap to return to the SUBMENU.

PDAMP

PDAMP is used to view or change the number of samples for rolling average of pulse output.

TEST

TEST allows the user to initiate a fully functional, artificial flow rate for the purpose of testing other connected equipment. When TEST is applied, all features of the meter will function at the stated flow rate (in gallons per second).

For TEST to function, the meter must be filled (not EMPTY PIPE).

To enter a value into the TEST feature, navigate to the TEST tab and enter a flow rate value in the VAL screen (in gallons per second only,) then ▼ to the VAL box and ▲ to the ON screen. This will initiate the TEST feature. The next ▲ would bring you to the OFF screen, but you can ‘hold and tap’ the arrows to return you to the sub menu while the feature operates.

After use, the TEST feature must be turned OFF. If the TEST feature is not turned OFF, the stated static flow rate (in gallons per second) will be shown any time the meter is full or in a flowing condition. Flow values recorded by the meter while the TEST feature is operating are permanently recorded in the displayed TOTAL. It may be useful to note that these values are only written to permanent memory every 15 minutes and cycling all power within this 15 minute time frame will return the meter to its previous total.

Power Indicators

A power indicator is displayed in the lower left of the main display window.

Any meter that was configured to be powered from an external power source will display a power plug icon when running on external power. If the connection to external power is lost, the meter will switch to the backup battery and the power icon will switch to a battery symbol.

OK on the battery indicator means battery voltage is above 6.4 volts.

LO on the battery indicator means the battery is low and should be replaced soon.

Being powered by external DC or AC

Being powered by battery voltage is sufficient

Being powered by battery voltage is low

If display reads, ‘BATT END’ replace battery immediately.
# Troubleshooting

The limited warranty set forth below is given by Seametrics, with respect to Seametrics brand products purchased in the United States of America. Seametrics warrants that products manufactured by Seametrics, when delivered to you in new condition in their original containers and properly installed, shall be free from defects in material and workmanship. Seametrics products are warranted against defects for a minimum period of two (2) years from date of installation, unless otherwise specified, with proof of install date. If no proof of install date can be provided, warranty period will be two (2) years from date of shipment from Seametrics, as defined on Seametrics’ invoice. Seametrics’ obligation under this warranty shall be limited to replacing or repairing the part or parts, or, at Seametrics’ option, the products, which prove defective in material or workmanship. The following are the terms of Seametrics’ limited warranty:

a. Buyer must give Seametrics prompt notice of any defect or failure and satisfactory proof thereof.
b. Any defective part or parts must be returned to Seametrics’ factory or to an authorized service center for inspection.
c. Buyer will prepay all freight charges to return any products to Seametrics’ factory, or another repair facility, as designated by Seametrics.
d. Defective products, or parts thereof, which are returned to Seametrics and proved to be defective upon inspection, will be repaired to factory specifications.
e. Seametrics will deliver repaired products or replacements for defective products to the buyer (ground freight prepaid) to the destination provided in the original order.
f. Products returned to Seametrics for which Seametrics provides replacement under this warranty shall become the property of Seametrics.
g. This limited warranty covers all defects encountered in normal use of Seametrics products, and does not apply to the following cases:
   i. Loss of or damage to Seametrics product due to abuse, mishandling, or improper packaging by buyer
   ii. Failure to follow operating, maintenance, or environmental instructions prescribed in Seametrics’ instruction manual
   iii. Products not used for their intended purpose
   iv. Alterations to the product, purposeful or accidental
   v. Electrical current fluctuations
   vi. Corrosion due to aggressive materials not approved for your specific product
   vii. Mishandling, or misapplication of Seametrics products
   viii. Products or parts that are typically consumed during normal operation
   ix. Use of parts or supplies (other than those sold by Seametrics) which cause damage to the products, or cause abnormally frequent service calls or service problems

h. A new warranty period will be established for repaired products, or products replaced during the original warranty period.
i. In the event that equipment is altered or repaired by the buyer without prior written approval by Seametrics, all warranties are void. Damage caused by equipment or accessories not manufactured by Seametrics may void the product’s warranty.
j. SOFTWARE: The Seller grants the user a non-exclusive license to use Seametrics’ software, according to the following limitations and conditions:
   i. The user may install the software on one or more desktop or laptop computers.
   ii. All title and intellectual rights to the software are owned by Seametrics.
   iii. No copies may be made or distributed except as described above.
   iv. The user may not modify or reverse-engineer the software.

THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, WHETHER ORAL, WRITTEN, EXPRESSED, IMPLIED OR STATUTORY. NO IMPLIED WARRANTY, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, APPLIED TO THE PRODUCTS AFTER THE APPLICABLE PERIOD OF THE EXPRESS LIMITED WARRANTY STATED ABOVE, AND NO OTHER EXPRESS WARRANTY OR GUARANTEE, EXCEPT AS MENTIONED ABOVE, GIVEN BY ANY PERSON OR ENTITY WITH RESPECT TO THE PRODUCTS, SHALL BIND SEAMETRICS. SEAMETRICS SHALL NOT BE LIABLE FOR LOSS OF REVENUES, OR PROFITS, OR INCONVENIENCES, EXPENSE FOR SUBSTITUTE EQUIPMENT OR SERVICE, STORAGE CHARGES, LOSS OF DATA, OR ANY OTHER SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGE CAUSED BY THE USE OR MISUSE OF, OR INABILITY TO USE THE PRODUCTS, REGARDLESS OF THE LEGAL THEORY ON WHICH THE CLAIM IS BASED, AND EVEN IF SEAMETRICS HAS BEEN ADVISED OF THE POSSIBILTY OF SUCH DAMAGES. IN NO EVENT SHALL RECOVERY OF ANY KIND AGAINST SEAMETRICS BE GREATER IN AMOUNT THAN THE PURCHASE PRICE OF THE PRODUCT SOLD BY SEAMETRICS AND CAUSING THE ALLEGED DAMAGE. WITHOUT LIMITING THE FOREGOING, YOU ASSUME ALL RISK OF LIABILITY FOR LOSS, DAMAGE, OR INJURY TO YOU AND YOUR PROPERTY AND TO OTHERS AND THEIR PROPERTY ARISING OUT OF USE OR MISUSE OF, OR INABILITY TO USE THE PRODUCTS NOT CAUSED DIRECTLY BY THE NEGLIGENCE OF SEAMETRICS.

SOME STATES DO NOT ALLOW LIMITATIONS ON THE DURATION OF AN IMPLIED WARRANTY. SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU. SIMILARLY, SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATIONS OF CONSEQUENTIAL DAMAGE, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU. THIS LIMITED WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS; HOWEVER, YOU MAY ALSO HAVE OTHER RIGHTS WHICH MAY VARY FROM STATE TO STATE.
