Seametrics FlowInspector v2.5.0 Release Notes – changes since last release

FlowInspector v2.5.0 software is designed as part of the Seametrics Data Logger systems. FlowInspector is used to set up the system, analyze and download/export data, and manage resulting data files.

System Requirements:

- PC computer with Windows 7, 8 or 10
  (Discontinued support for Windows 98, NT, 2000, XP and Vista)

- 5.3 MB disk space

- Serial or USB port

The user manual, including installation instructions, are available at http://www.seametrics.com/downloads.

Additions

- Setup and download for AG3000/iMAG 4700/FT400 meters.

Changes

- Unit changes will persist during entire user session rather than per file.

- Expanded available Rate volume units. Discontinued support for milliliter (mL) and added mega liter(ML), barrels(B) and million imperial gallons(MIG).

- Expanded available Total volume units. Added support for kilo liters (kL), barrels(B), cubic meter x 1000(m^3k), million cubic feet (M ft^3), imperial gallons x 1000(IGk) and million imperial gallons(MIG). Discontinued support for cubic feet (CF).

Fixes

- Updates to work with Windows' User Account Control (UAC) security infrastructure. Fixes UAC issues preventing appending files and export to .txt.
